

HIV Surveillance Report — Alaska, 1982–2014

From January 1, 1982 through December 31, 2014, 1,616 cases of human immunodeficiency virus (HIV) infection were reported to the Alaska Section of Epidemiology (SOE), including cases with an initial diagnosis in Alaska and those previously diagnosed out of state who are living in Alaska (Table). During 2014, 76 cases of HIV infection were reported to SOE; 42 (55%) of which were initially diagnosed in Alaska, yielding a statewide incidence rate in 2014 of 5.7 cases per 100,000 persons. This HIV Surveillance Report contains summary data and highlights for cumulative cases reported from 1982 through 2014 (n=1,616), incident cases diagnosed in Alaska in 2014 (n=42), and Persons Living with HIV in Alaska as of December 31, 2014 (n=618).

Table. Summary of Reported Cases of HIV by Select Characteristics — Alaska, 1982–2014

	1982–2014				2014			
	All Reported Cases n=1,616		Reported Cases First Diagnosed in Alaska n=1,137		All Reported Cases n=76		Reported Cases First Diagnosed in Alaska n=42
